

“IT AND TECHNOLOGY- PREPARE YOURSELF FOR THE FUTURE”

There is no doubt that IT industry is the undisputed king engineering field, it is growing tremendously with every passing year. As a developer, I would like to outline that today 40 lakh employees are a part of Indian IT industry.

The demand for fresher's and trained people has reached an all time high due to increased competition between companies.

Emerging areas such as AI, ML, Big Data are the most sought after skills today , and not just in IT sector but also in automotive

and manufacturing sector. The Covid-19 crisis has highlighted importance of technologies such as Cloud computing which made it possible for people to work from home without risking their life. Even legacy technologies such as SAP ERP, Oracle and mainframe stand strong still.

Therefore, with growing demand for a wide range of cutting edge technology domains, one can surely think of a bright future in unstoppable IT sector.
