Chandigarh University makes national record in the field of research, files 500 patents in 7 years

Chandigarh University makes national record in the field of Research. Files 500 patents in just 7 years.

The economic status of a nation depends upon the efforts put by the respective countries in the field of research and innovation.

Developed nations such as US, Japan, Germany are amongst the top nations which have major share in global innovation index, whereas countries like India lag behind and are dependent on such countries for new age technologies.

As per the data available from world intellectual property organization WIPO with more than 1.5 million patents filed, China leads the list of countries who has filed the maximum number of patents in 2019 which is followed by USA, with 6.6 million. India has been ranked 7th in this list with more than 20,000 patents being filed in 2019 with just 2.2% increase over the last year.

The main reason attributed to the current situation is that India with 0.66% contribution of its GDP to R&D currently ranks 152nd amongst the nations which contribute higher percentage of their GDP towards research and innovation.

Working with a mission to make India a self-reliant nation in developing new technologies and acclaimed top position in global innovation index, Chandigarh University Gharuan has emerged as the leading university of the country which has filed maximum number of patents in 2019-20.

According to the latest data released by government of India's Office Controller General of patent designs and trademarks for the year 2019-20, Chandigarh University, Gharuan has emerged as the leading university with highest number of R&D outputs.
